JOURNAL OF
NON-CRYSTALLINE SOLIDS

A journal on the physical, chemical and structural properties of glasses, amorphous semiconductors and metals, including the liquid state

Editor: IR.A. Weeks
Co-editor: D.L. Kinser
Nashville, TN, USA

Regional Editors:
R. Brückner, Berlin, Germany
H. Fritzsche, Chicago, IL, USA
A. Leadbetter, Chilton, England
O.V. Mazurin, Leningrad, USSR
S. Sakka, Kyoto, Japan
M.J. Weber, Livermore, CA, USA
J. Zarzycki, Montpellier, France

JNCSBJ MASTER INDEX VOLS. 101–110
SEPTEMBER 1989 ISSN 0022-3093

NORTH-HOLLAND AMSTERDAM

The founding editor of the Journal of Non-Crystalline Solids is Professor J.D. Mackenzie. He served with great distinction from 1968 until 1988

Editorial Addresses

Editor: R.A. Weeks
615–322 2923

Co-editor: D.L. Kinser
615–322 3537

Editorial Assistant: L. Alexander
615–322 2058

Box 6007-B, Vanderbilt University, Nashville, TN 37235, USA

FAX: 615–322 7062

Regional Editors:

R. Brückner, Institut für Nicht-Metallische Werkstoffe der Technischen Universität Berlin, Anorganische Werkstoffe, 1 Berlin 12, Englische Strasse 20, Germany
H. Fritzsche, University of Chicago, James Franck Institute, 5640 Ellis Avenue, Chicago, IL 60637, USA
A.J. Leadbetter, Daresbury Laboratory, Daresbury, Warrington WA4 4AD, UK
O.V. Mazurin, I.V. Grebenshchikov Institute of Silicate Chemistry, Academy of Sciences of the USSR, nab. Makarova 2, Leningrad 199155, USSR
S. Sakka, Institute for Chemical Research, Kyoto University, Uji, Kyoto-Fu 611, Japan
M.J. Weber, Lawrence Livermore National Laboratory, P.O. Box 808, Livermore, CA 94550, USA
J. Zarzycki, Laboratory of Materials Science, University of Montpellier, Place Eugène Bataillon, 34-Montpellier, France

(for complete addresses see page 2 of the preliminary pages)

Review Articles, Research Papers, Comments, and Letters to the Editor on physical, chemical and structural properties of glasses, amorphous semiconductors and metals, including the liquid state, are welcome.
Manuscripts should be submitted in triplicate, typed with double line spacing, and contain a factual abstract of 200 words or less. Original figures (*to be returned after publication*) should be included.
A restricted number of short articles of special interest will be published as Letters *within three months of receipt* by the Editor.
For more information see the Instructions to Contributors on page 3 of the cover.
Manuscripts should be sent to the Editor or to one of the Regional Editors. Letters should be sent to the Editor.

It is understood that a manuscript submitted to this journal has not been published elsewhere nor is it planned for such publication. Permission to reproduce published material in a manuscript is the sole responsibility of the authors.

Correspondence with the Publisher regarding articles accepted for publication or corrections should be submitted to: Desk-editor JNCS, North-Holland Physics Publishing, P.O. Box 103, 1000 AC Amsterdam, The Netherlands (Phone 020-586 2549, telex 10704 ESP OM, FAX 020-586 2580).

JOURNAL OF NON-CRYSTALLINE SOLIDS is published in monthly issues. For 1989, 10 volumes (30 issues) have been announced. The subscription price for these volumes is Dfl.3250.00 (US $1625). Postage and handling amount to Dfl.270.00 (US $135). Therefore the total price for 1989 is Dfl.3520.00 (US $1760). The Dutch guilder price is definitive, dollar prices are for guidance only. Claims for issues not received should be made within three months of publication. If not, they cannot be honoured free of charge.

Journals are sent by surface delivery to all countries, except the following countries where SAL air delivery (Surface Airlifted Mail) is ensured: USA, Canada, Japan, Australia, New Zealand, People's Republic of China, Israel, India, Brazil, Malaysia, Singapore, South Korea, Taiwan, Pakistan, Hong Kong, South Africa. Air mail rates for other countries are available upon request.
SUBSCRIPTIONS should be sent to the Publisher, Elsevier Science Publishers B.V., Journals Department, P.O. Box 211, 1000 AE Amsterdam, The Netherlands, or to any subscription-agent or bookseller.

Elsevier Science Publishers B.V.: All rights reserved. No part of this publication may be reproduced, stored in a retrieval system or transmitted in any form or by any means, electronic, mechanical, photocopying, recording or otherwise, without the prior permission of the publisher, Elsevier Science Publishers B.V. (North-Holland Physics Publishing Division), P.O. Box 103, 1000 AC Amsterdam, The Netherlands.
Special regulations for authors – Upon acceptance of an article by the journal, the author(s) will be asked to transfer copyright of the article to the publisher. This transfer will ensure the widest possible dissemination of information.
Submission to this journal of a paper entails the author's irrevocable and exclusive authorization of the publisher to collect any sums or considerations for copying or reproduction payable by third parties (as mentioned in article 17 paragraph 2 of the Dutch Copyright Act of 1912 and in the Royal Decree of June 20, 1974 (S. 351) pursuant to article 16b of the Dutch Copyright Act of 1912) and/or to act in or out of Court in connection therewith.

Special regulations for readers in the U.S.A. – This journal has been registered with the Copyright Clearance Center, Inc. Consent is given for copying of articles for personal or internal use, or for the personal use of specific clients. This consent is given on the condition that the copier pays through the Center the per-copy fee stated in the code on the first page of each article for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. The appropriate fee should be forwarded with a copy of the first page of the article to the Copyright Clearance Center, Inc., 27 Congress Street, Salem, MA 01970, U.S.A. If no code appears in an article, the author has not given broad consent to copy and permission to copy must be obtained directly from the author. All articles published prior to 1981 may be copied for a per-copy fee of US $2.25, also payable through the Center. (N.B. For review journals this fee is $0.25 per copy per page.) This consent does not extend to other kinds of copying, such as for general distribution, resale, advertising and promotion purposes, or for creating new collective works. Special written permission must be obtained from the publisher for such copying.

No responsibility is assumed by the Publisher for any injury and/or damage to persons or property as a matter of products liability, negligence or otherwise, or from any use or operation of any methods, products, instructions or ideas contained in the material herein.

Journal of Non-Crystalline Solids, Subject index Vols. 101–110 (1989) 25–45
North-Holland, Amsterdam

SUBJECT INDEX TO VOLUMES 101–110

Absorption
Silicates, Thin Films 110 (1989) 13

Acoustic Properties
Non-oxide Glasses, Optical Properties 104 (1988) 17

Aerogels
Small Angle Neutron Scattering, Fractals 106 (1988) 161
Small Angle X-ray Scattering, Silica 106 (1988) 157

Alloys
Metallic Glasses, Auger Electron Spectroscopy, Diffusion 107 (1988) 118
Metallic Glasses, Electronic Conductivity, Electric Properties 105 (1988) 303
Metallic Glasses, Relaxation, Calorimetry, Glasses Containing Transition Metal Ions, Thermal Properties 107 (1989) 225
Structure, Amorphous Solids 106 (1988) 81

Alumina
Sol–Gel Method, Photoinduced Effects 109 (1989) 164

Amorphous Solids
Alloys, Structure 106 (1988) 81
Chalcogenides, Glass Transition 103 (1988) 73
Chalcogenides, Thin Films 101 (1988) 37
Chalcogenides, Thin Films 101 (1988) 151
Crystallization, Metallic Glasses 103 (1988) 79
Diffusion, Metallic Glasses 101 (1988) 187
Electron Diffraction, Semiconductors 101 (1988) 156
Glass Formation, Density 108 (1989) 221
Glass Transition, Structure 102 (1988) 259
Halide Glasses, Structure 103 (1988) 257
Medium-Range Order, Chalcogenides, X-ray Diffraction 106 (1988) 291
Medium-Range Order, Structure 106 (1988) 313
Metallic Glasses, Dielectric Properties 103 (1988) 151
Metallic Glasses, Hardness 103 (1988) 45
Metallic Glasses, Nucleation 103 (1988) 21
Metallic Glasses, Structure 101 (1988) 135
Metallic Glasses, Structure 104 (1988) 62
Neutron Diffraction, Structure, Non-oxide Glasses 106 (1988) 66
Neutron Diffraction, X-ray Diffraction, Oxides, Silica 106 (1988) 1
Non-oxide Glasses, Silicon Nitride, Nuclear Magnetic Resonance 106 (1988) 256
Nuclear Magnetic Resonance, Silicates, Short-Range Order, Structure, Liquids 106 (1988) 359
Nucleation, Polymers 102 (1988) 148
Optical Properties, Infra-red Absorption 104 (1988) 59
Phase Separation, Structure 101 (1988) 297
Phosphates, XPS 103 (1988) 35
Polymers, Calorimetry 101 (1988) 90
Quasicrystals, Short-Range Order, Medium-Range Order 106 (1988) 207
Quasicrystals, Structure 106 (1988) 262
Semiconductors, Density 101 (1988) 170
Semiconductors, Electronic Structure, Photoresponse, Photoinduced Effects, Transient Effects, Trapping 107 (1989) 301
Semiconductors, Experimental Techniques 103 (1988) 3
Semiconductors, Photoconductivity 105 (1988) 17
Semiconductors, Stäbler–Wronski Effect, Silicon, Photoconductivity,
Semiconductors, Thin Films 103 (1988) 9
Structure 106 (1988) 282
Structure, Liquids 106 (1988) 92
Thermoelectric Power, Electronic Conductivity 104 (1988) 190
Thin Films, Crystallization 103 (1988) 221
Thin Films, Metallic Glasses 103 (1988) 14
Thin Films, Phase Transition 104 (1988) 195
Thin Films, Semiconductors 103 (1988) 143
Thin Films, Structure 101 (1988) 179
X-ray Diffraction, Phosphates, Structure 106 (1988) 70

Auger Electron Spectroscopy
Metallic Glasses, Alloys, Diffusion 107 (1988) 118
XPS, Ionic Conductivity, Electronic Conductivity 110 (1989) 44

Bonding
Nuclear Magnetic Resonance, Silica 106 (1988) 408

Borates
Crystallization, Glass Ceramics 102 (1988) 136
Density, Structure 109 (1989) 105
Electron Spin Resonance, Glasses Containing Transition Metal Ions, Oxides 105 (1988) 91
Electron Spin Resonance, Optical Properties 101 (1988) 1
Electronic Conductivity, Hardness 105 (1988) 78
Heat Capacity, Glass Transition 104 (1988) 148
Luminescence, Oxides 107 (1988) 49
Mixed-alkali Effect, Ionic Conductivity 104 (1988) 22
Molecular Dynamics, Infra-red Absorption, Density of States 108 (1989) 260
Mössbauer Effect, Electrical Properties and Relaxation, Phosphates 108 (1989) 87

Neutron Diffraction, Phonons 106 (1988) 116
Neutron Diffraction, X-ray Diffraction, Structure, Short-Range Order 106 (1988) 30
Nuclear Magnetic Resonance, Structure 107 (1988) 81
Phosphates, Structure 102 (1988) 196
Radiation Effects, Optical Properties 104 (1988) 31
Raman Spectra, Structure 105 (1988) 251
Raman Spectra, Tungstates 108 (1989) 109
Sol–Gel Method, Silicates, Phosphates 110 (1989) 122
Structure, Glass Transition 103 (1988) 201
Structure, Mössbauer Effect 103 (1988) 28
Structure, Nuclear Magnetic Resonance 101 (1988) 280
Structure, X-ray Diffraction 101 (1988) 101
Theory, Structure 104 (1988) 261

Calorimetry
Chalcogenides, Relaxation 104 (1988) 283
Metallic Glasses, Relaxation, Alloys, Glasses Containing Transition Metal Ions, Thermal Properties 107 (1989) 225
Metallic Glasses, X-ray Diffraction, Glasses Containing Transition Metal Ions 107 (1989) 233
Polymers, Amorphous Solids 101 (1988) 90
Sol–Gel Method, Silica 105 (1988) 162
Sol–Gel Method, Silica, Infra-red Absorption 107 (1989) 199

Carbon
Thin Films, Hydrogen Effects 107 (1988) 128

Catalysis
Sol–Gel Method, Surface Properties 110 (1989) 170

Chalcogenides

Interlaminar Response of Composite Materials

edited by **N.J. Pagano,** *Wright Patterson Air Force Base, Ohio, OH, USA*

(Composite Materials Series, 5)

This book presents the topics of major importance toward understanding the most feared failure mode in composite laminates, namely delamination. There are few books at present that describe the phenomenon of composite laminate failure by delamination in such detail.

Considerable emphasis is placed on the theoretical and experimental developments in research studying the free edge problem, the most prominent source of delamination. The evolutionary development of the global-local laminate model is given as well as a modern finite element treatment of delamination fracture mechanics. Experimental observations of the effects of delamination and a thorough presentation of experimental characterization techniques are also given.

Written by pioneers and principal researchers in various aspects of composite delamination, starting from basic principles to the most current research findings, the work provides a complete study of the theoretical and experimental aspects of composite delamination in one volume.

Contents: **1. Models for Studying Free-Edge Effects** *(N.J. Pagano, S.R. Soni)*. Introduction. Effective-modulus theory. Free-edge boundary value problem. Finite-difference solution. Analysis of stacking sequence effect. Primitive delamination model. Elastic plate model for σ_z. Extended Reissner variational principle for composite laminates (local model). The global-local laminate variational model. Recent work in free-edge models. References. **2. Fracture Analysis of Interlaminar Cracking** *(A.S.D. Wang)*. Introduction. Physical characteristics of delamination. The energy method for free-edge delamination. Illustrative examples of free-edge delamination. Summarizing remarks. Appendix. References. **3. Experimental Observations of Free-Edge Delamination** *(R.Y. Kim)*. Abstract. Introduction. Initiation of delamination. Experimental determination of interlaminar normal stress. Prediction methodology for onset of delamination. Effect of delamination on stiffness. Delamination control. Summary. References. **4. Experimental Characterization of Delamination Fracture** *(J.M. Whitney)*. Introduction. The short-beam shear test. Strain energy release rate. The double cantilever beam test. Mode-I edge-delamination test. The end-notch flexure test. The cracked-lap shear specimen. Off-axis centre-notch tensile test. One-dimensional delamination buckling. Summary. List of symbols. References. Author Index. Subject Index.

Instructions to Contributors

Contributions should be submitted in triplicate, typed with double line spacing, with original figures (*to be returned after publication*) and an abstract of 200 words. Manuscripts for papers should be submitted to the Editor or to one of the Regional Editors. Authors may choose to whom their manuscript is to be submitted. Letters to be considered for short publication times must be sent to the Editor. The submission of a manuscript will automatically imply that no existing copyright will be infringed.

LETTERS: The Journal seeks to publish a limited number of letters which report new, significant material in rapidly advancing areas of non-crystalline solids of broad interest, with the objective of publication *within three months of receipt*. Letters to be published in this fashion may be submitted by facsimile transmission to the Editor, followed by hard copy with *original* figures to the Publisher. Review of such letters will be expedited by the use of overnight mail services, facsimile transmission and electronic mail. Letters will normally not exceed 1000 words, including references, and contain three or less figures (*these must be original line drawings only*). A short abstract is required.

COMMENTS: Comments on papers published in the Journal are welcomed in the form of "Comments on published Papers". Authors will be asked to respond to the Comments; their responses will normally be published with the Comments.

REVIEW PAPERS: The Editor will solicit review papers in appropriate topical areas. Readers with suggestions for topics and volunteer authors are urged to correspond with the Editor.

RESEARCH PAPERS: Papers normally receive at least two independent reviews which are sent to the author with the Editor's recommendations and decision as to acceptability.

In a general way, contributors are invited to follow the recommendations of the Symbols and Units Nomenclature Commission of the I.U.P.A.P. (Physica 146A (1987) 1–68).

Symbols of scalar quantities are printed in italics (e.g. D for a diffusion constant, l for length, p for pressure). Vectors are printed in bold type, indicated by wavy underlining in the text or in formulae.

All letters or groups of letters representing functions (exp, sin, log), units (cm, dyne, atm), chemical symbols or any abbreviations not representing a quantity (d-shell, n = neutron), names of places or organisations (AERE, ANL) are printed in ordinary type, and should be left in the typescript without underlining or full stops. The approximate place of the figures and tables should be indicated in the typescript. Each table should be on a separate sheet, and should have a title in addition to its serial number.

Line figures should be originals, drawn in Indian ink and fully lettered. Figures must not be larger than 8 in. × 11 in. Reduction of size during reproduction should be kept in mind. Photographs for reproduction should be unmounted, unless they form part of a composite figure, and contain more contrast than is desired in the printed version. Where necessary, the top edge should be identified on the back. The captions should be listed on a separate sheet. *Note:* Original figures will be returned after publication.

References should be consecutively numbered in the text, thus: 'Jones and Smith [1] have reported that...,' and listed at the end of the manuscript (after any appendices). Whenever possible, references to published papers should be given in preference to unpublished reports.

REPRINTS. 25 reprints of each article will be supplied to the first author free of charge. An order form for further reprints will be provided with the author's proofs. It should be returned to the publisher together with the corrected proofs.

High T_c Superconductors

Preparation and Application

Proceedings of Symposium A, E - MRS Fall Conference,
Strasbourg, France, 8-10 November, 1988

P.F. Bongers, C. Schlenker *and* **B. Stritzker** *(editors)*

Repr. from Journal of the Less Common Metals, Vols. 150 & 151

(European Materials Research Society Symposia Proceedings, 6)

The papers in this two volume set provide the latest information on research and development in the field of high T_c-materials. Special emphasis is placed on methods of preparation and microstructural characterization for both thin films and single crystals. Considerable attention is also paid to the potential applications of thin films and bulk materials. The following topics are covered in detail: New superconductors; Relations between structure and/or substitution and superconductivity in ternary Cu-oxides; Single crystals, microstructure; Thin films, preparation and properties; Technical applications.

A Selection of Contents: **Vol. I. 1. General Theory.** Unconventional superconducting properties of the High T_c oxides *(G. Deutscher)*. Understanding high temperature superconducting oxides *(B.K. Chakraverty et al.)*. Raman scattering as an analytical tool for high T_c superconductors *(C. Thomsen et al.)*. **2. Structure, New Materials and Substitution.** Structures and microstructures in the bismuth and thallium superconductors *(M. Hervieu et al.)*. Electron microscopic studies of high T_c superconductors *(S. Amelinckx et al.)*. Structure and conductivity of copper oxide based compounds *(D.M. de Leeuw)*. Order-disorder and superconductivity in Tl-Ba-Cu-O and lead-substituted Bi-Sr-Ca-Cu-O compounds *(P. Bordet et al.)*. A homologous series based on $YBaCuO, Ba_{16}Y_2Cu_{24}C_{56-m} (0 < m < 8, m$ even) *(M.A. Alario-Franco et al.)*. Two new bulk superconducting phases in the Y-Ba-Cu-O system: $YBa_2Cu_{3.5}O_{7-e}$ ($T_c = 40$K) and $YBa_2Cu_4O_{8+x}$ ($T_c = 80$ K) *(J. Karpinski et al.)*. Characterization of bulk superconducting high-temperature ceramics by very low field a.c. initial susceptibility *(B. Loegel et al.)*. High-pressure phase diagrams (1 . 3000 bar oxygen) of the (Y-Ba-Cu-O)-O_2systems *(J. Karpinski et al.)*. Reproducible growth of large free crystals of $YBa_2Cu_3O_{7-x}$ *(W. Sadowski, H.J. Scheel)*. Crystal fibers of Bi-Sr-Ca-Cu-O materials grown by the laser floating zone method *(G.F. de la Fuente et al.)*. High T_c phase stabilization in Bi-Ca-Sr-Cu-O systems by lead doping *(N. Brnicevic et al.)*. Preparation of superconductors of the BiSrCaCuO system by glass crystallization *(A.P. Concalves et al.)*.
Vol. II. 3. Physical Properties. The breaking torque concept in a sintered LaSrCuO sample *(L. Fruchter et al.)*. Critical currents and magnetic relaxation of epitaxial $YBa_2Cu_8O_{7-h}$ films *(R. Griessen et al.)*. **4. Materials, Single Crystals, Phase Diagrams.** Crystal growth of oxide superconductors *(H.J. Scheel)*. **5. Thin Films.** Direct production and properties of sputtered epitaxial $YBa_2Cu_3O_7$ thin and ultrathin films on (100) and (110) $SrTiO_3$ *(H. Schubert et al.)*.
6. Applications. The development of SQUID magnetometers using bulk ceramic superconductors *(C.E. Gough et al.)*. Author Index. Subject Index.
